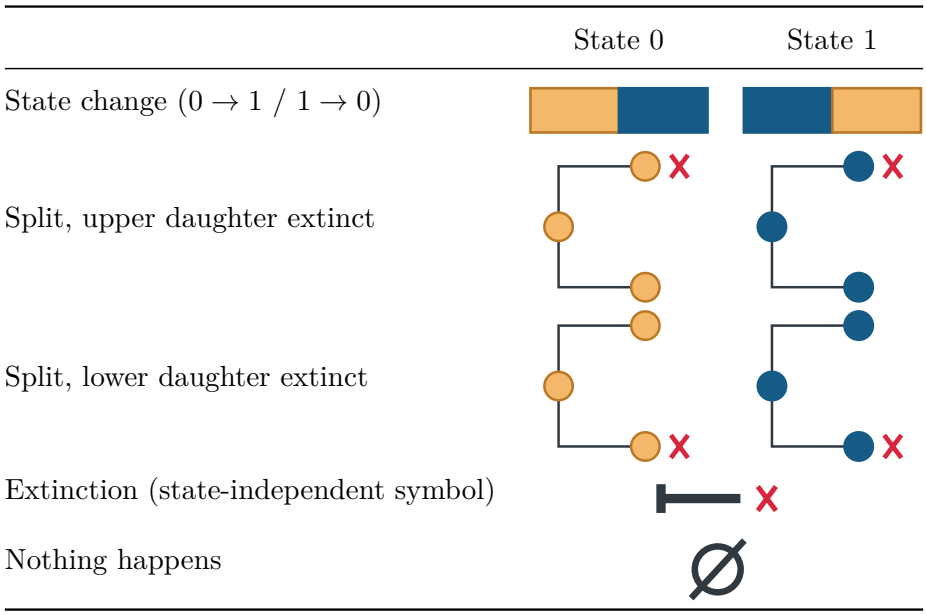
BiSSE icons: sketch-matched version

The supplied geometry is preserved: touching state blocks, right-angle splits, unnumbered circles, crosses and a no-event symbol. State 0 is light, softened orange; state 1 is deep blue. Extinction crosses are vivid crimson. The state colors differ in both hue and lightness; extinction also has its distinct cross shape.



Legend. Read evolution from left to right. All three circles in a split have the same state: BiSSE speciation does not change state. The cross identifies the daughter whose descendants eventually die out; it does not require immediate extinction at speciation. The slash-circle means *no event* in this custom legend, not an empty clade or extinction. In equations, its probability is $1-(\lambda_i+\mu_i+q_{ij})\Delta t$ to first order.

Upload this project, or copy `bisse-sketch.sty` into an existing project.

```
\usepackage{bisse-sketch}  % in the preamble

\bisseBlocks{0}{1}
\bisseBlocks{1}{0}
\bisseUpper{0}   \bisseUpper{1}
\bisseLower{0}   \bisseLower{1}
\bisseDeath
\bisseNoEvent
```

Set a width with, for example, `\bisseUpper[18mm]{1}`. Individual vector PDFs are in `icons/`; for example:

```
\includegraphics[width=18mm]{icons/split-upper-1.pdf}
```

No numerals, gradients, shadows, grid background or red/green pairing are used. The palette can be adjusted by redefining `bisseBlue`, `bisseOrange`, `bisseOrangeOutline`, `bisseExtinct` and `bisseDark` after loading the package.
