BiSSE event icons

Simple, editable vector graphics for equations, tables and slides. Blue/open circles denote state 0; vermillion/filled circles denote state 1. Numerals preserve state identity in grayscale. Time runs from left to right.

Event	State 0	State 1
State change		
Speciation: same-state daughters		Split; upper daughter dies out		Split; lower daughter dies out		Extinction		
Nothing happens		

Meaning of the dashed branch and cross. A dashed daughter line is destined to leave no living descendants; the cross denotes extinction. This summarizes its eventual fate, not necessarily extinction within the short interval containing the split. A solid daughter is the retained path; the icon alone does not assert that both solid daughters survive to the present.

BiSSE interpretation. Speciation is $0 \to 0 + 0$ or $1 \to 1 + 1$; state change occurs along a lineage, not at the split. The two hidden-split orientations correspond to the two contributions $\lambda_i D_i E_i$ and $\lambda_i E_i D_i$ in the backward likelihood equation.

Use directly in Overleaf

Upload `bisse-icons.sty` and add `\usepackage{bisse-icons}`. Commands take a state argument and an optional width:

```
\bisseChange{0}{1}
\bisseSpeciation{0}
\bisseHiddenUpper{1}
\bisseHiddenLower[24mm]{0}
\bisseExtinction{1}
\bisseNothing{0}
```

The default width is 30 mm. All icons share the same bounding box. For PDF-only use, upload the `icons` folder and write, for example:

```
\includegraphics[width=30mm]{icons/hidden-upper-0.pdf}
```

Change the palette: redefine `bisseZero` and `bisseOne` after loading the package. Open/filled symbols, numbers and extinction crosses remain informative without relying on hue.
